

Replacement Notes for : FST 10-pin, Double

Installations Notes:

The double FST 10-pin replacement ballast, pictured at left, is replaced by the FA100 ballast using the existing input harness from the tanning unit. The existing 8-pin output harness from the tanning unit plugs directly into the FA100 output connector. This ballast was typically used as a replacement for Kesio style ballasts.

Typical Applications:

Sun Industries, Shaw, DPRM
