

# Replacement Notes for : Kesio, 10-pin

## Installations Notes:

10-pin Kesio ballast, pictured at left, is replaced by the FA100 ballast using the existing input harness from the tanning unit. The existing 8-pin output harness from the tanning unit plugs directly into the FA100 output connector. Note that the input and output connectors are on opposite ends of the FA100.

## Typical Applications:

Peacock, Sun Capsule, DPRM

Note: Some of these ballasts also had black cases with and without identifying labels. These ballasts were typically labeled with A2100120.
